

Patient Details

Name: Vaishali Chhangani

Age: 45 Gender: Female

Treatment Recommendations:

- Hypertension Control:** Optimize hypertension management to reduce risks associated with high blood pressure.
- Migraine Management:** Implement a treatment plan for migraine management, possibly including lifestyle changes and medications.
- Radiation Therapy:** Evaluate the need for radiation therapy to manage the meningioma.
- Surgical Intervention:** Consider surgical resection of the meningioma if symptomatic.

Possible Causes:

- Environmental Factors:** Exposure to radiation or other environmental factors may play a role in meningioma development.
- Genetic Factors:** Certain genetic predispositions may increase the risk of meningiomas.
- Hormonal Influences:** Hormonal changes, particularly in women, may contribute to the development of meningiomas.

Detected Features:

tumor 1: Area = 2.51 mm², Size = 33.26mm x 32.47mm, Shape = elongated (horizontal), Location = middle right

Recommended Blood Tests:

- Complete Blood Count (CBC):** To evaluate overall health and detect a range of disorders.
- Electrolyte Panel:** To assess kidney function and balance of electrolytes, which can be affected by hypertension.
- Thyroid Function Tests:** To rule out thyroid disorders that can contribute to headaches or hypertension.

Prescriptions:

- Antihypertensives:** To control high blood pressure and reduce cardiovascular risks.
- Migraine Prophylaxis Medications:** To prevent the frequency and severity of migraine attacks.
- Pain Relievers:** To manage severe headaches associated with migraines.
