

Patient Details

Name: rgj aew,
Age: 3 Gender: Male

Treatment Recommendations:

- 0: Surgical Resection: Remove the meningioma if feasible due to its size and location.
- 1: Radiation Therapy: Consider radiation therapy for residual tumor or if surgery is not possible.
- 2: Antiepileptic Medication: Manage epilepsy symptoms to prevent seizures.
- 3: Rehabilitation Therapy: Implement rehabilitation for stroke recovery.

Possible Causes:

- 0: Genetic Factors: Potential hereditary predisposition to brain tumors.
- 1: Previous Head Trauma: History of head injury may contribute to tumor development.
- 2: Environmental Exposures: Possible exposure to carcinogenic substances contributing to tumor growth.

Detected Features:

tumor 1: Area = 2.51 mm², Size = 33.26mm x 32.47mm, Shape = elongated (horizontal), Location = middle right

Recommended Blood Tests:

- 0: Complete Blood Count (CBC): Evaluate overall health and detect anemia or infection.
- 1: Electrolyte Panel: Assess electrolyte levels which can affect neurological function.
- 2: Thyroid Function Tests: Check for thyroid disorders that may influence metabolism and neurological health.

Prescriptions:

- 0: Levetiracetam: Used to control seizures associated with epilepsy.
- 1: Aspirin: May be prescribed for stroke prevention.
- 2: Antidepressants: To manage potential mood disorders post-stroke.
